

“My Name is Arvind Sekhar and I am Modern Agriculture”*

Agriculture needs as much mathematics as it needs biology. Modern agricultural practices—such as hybrid variety development or farming using insect-resistant or herbicide-tolerant seeds—have been possible only through numerous contributions from multiple scientific disciplines. As a bioinformatics analyst, I couldn't be any more near this truth.

Knowing that your work has a purpose, and that purpose makes a difference to numerous lives on the planet, creates a sense of belonging. If computers, biology and plants can help feed billions, why would we wait? Let's innovate.

* Arvind Sekhar, Bioinformatics Analyst,
Dow AgroSciences, Indianapolis, Indiana
